## What are Trace Truck Kits?

Trace Truck Kits include everything you need to get AC power on your truck. In fact, Trace's Premium Truck Kit also outfits your sleeper with cable TV and telephone/data. Both Truck Kits include an 1,100 watt inverter/charger, external weather proof connections, internal outlets and all installation related accessories and hardware. When it comes to overall value and performance there are no better systems on the market.

## Which kit is right for me?

Both Trace Truck Kits, Standard, and Premium, include the same 1,100 watt inverter/charger, installation hardware and accessories (i.e. remote control, fuse block, battery temperature sensor, and floor pass through block). Where the difference lies is in the exterior and interior connections available.

The Standard kits offer you an exterior weatherproof receptacles for AC power. Inside the sleeper the Standard kit comes with a single AC outlet box with four plug-ins. The Standard kit includes a wire harnesses that take power from the exterior connection to the inverter/charger and out to the interior AC outlet box or boxes.

If you subscribe to Park 'n View then you will want our Premium kit. This kit features three external weatherproof connections: one for AC power, one for cable TV, and another for telephone/data. Inside you will find the corresponding outlets. In one combination outlet box you get two AC plug-ins and a telephone jack. In the other combination box you get two more AC plug-ins and a cable TV connection. As with all Trace Truck Kits you also get the wire harnesses that take power, cable TV or telephone from the exterior connections to the inverter/charger and out to the interior AC outlet box or boxes.

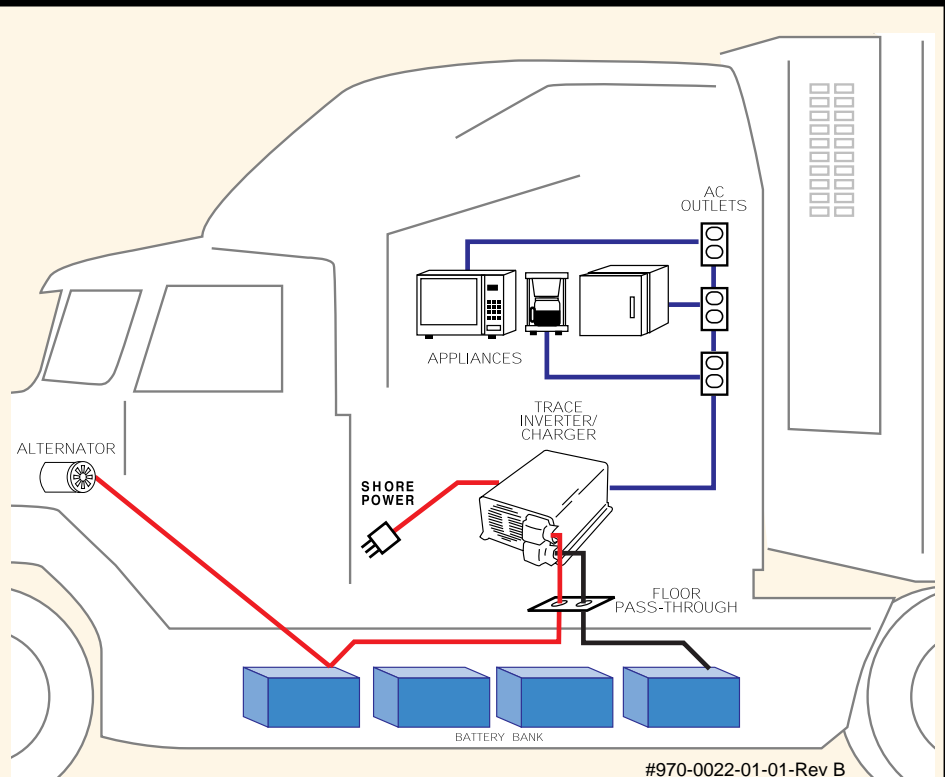

As you can clearly see, you get a lot for your money when you purchase a Trace Truck kit!
